Review Test Submission: Week 02 Quiz

User	Dong Gao
Subject	Algorithms and Complexity
Test	Week 02 Quiz
Started	12/03/16 10:30 AM
Submitted	12/03/16 10:33 AM
Due Date	16/03/16 5:00 PM
Status	Completed
Attempt Score	5 out of 5 points
Time Elapsed	3 minutes
Instructions	You should attempt the quiz after the lecture and your tutorial. • The quiz is available for a period of 10 days. • You may attempt the quiz multiple times (if you happen to get a question wrong, you can do it again) • Your score on the quiz will be recorded in the grade book. The score is not used when determining your final mark in this subject • The quiz might not display equations correctly in some browsers. If you experience problems, we recommend that you use Firefox. **Note:** you must complete at least eight of the weekly quizzes to meet one of the hurdle requirements in this subject

Question 1

1 out of 1 points

On my machine, a certain $O(n^2)$ sorting algorithm takes one second to sort 1000 random items. Sorting 100,000 random items can be expected to take:

Selected Answer: c. 2-3 hours

Answers:
a. 1-2 minutes
b. 10-15 minutes
c. 2-3 hours
d. about one day

e. almost one year

Response Feedback: That's right. We would expect 100 times as many elements to take 100 x 100 = 10,000 times as long to be sorted.

Question 2

1 out of 1 points

Which of the following claims about growth rate are correct:

Answers:

d. $3n^3 + n\sqrt{n} \in O(n^3)$

$(2n \log_2 n)^2 \in O(n^2)$

a. $\sqrt{n} \in O(\log_{10} n)$

b. $\log_2 n \in O(1/\sqrt{n})$

c. $3n^3 + n\sqrt{n} \in O(n^3)$

d. $\sqrt{n} \in O(\sqrt[3]{n})$

e.

Response Feedback: That's right, only one of the statements is correct.

Question 3

1 out of 1 points

Which of the following claims are correct:

Answers:

$\log_{10} n \in \Theta(\log_2 \sqrt{n})$

$2^{n+1} \in \Theta(2^n)$

$(n+2)^2 \in \Theta(n^2)$

$(\log_{10} n)^2 \in \Theta(\log_2 n)$

$n^{2n} \in \Theta(n^n)$

$\log_{10} n \in \Theta(\log_2 \sqrt{n})$

$2^{n+1} \in \Theta(2^n)$

$(n+2)^2 \in \Theta(n^2)$

Response Feedback: Spot on! Well done.

Question 4

1 out of 1 points

Which of the following claims are correct:

$\sum_{i=1}^{n} 3^i \in \Theta(3^{n+1})$

$\sum_{i=1}^{n} 3^i \in \Theta(3^{n-1})$

$\sum_{i=1}^{n} 3^i \in \Theta(3^n)$

Answers: $\sum_{i=1}^{n} 2^i \in \Theta(3^n)$

$\sum_{i=1}^{n} 3^i \in \Theta(3^{n+1})$

$\sum_{i=1}^{n} 3^i \in \Theta(3^{n-1})$

$\sum_{i=1}^{n} 3^i \in \Theta(3^n)$

Response Feedback: That's right.

Question 5

1 out of 1 points

Order these seven functions, from smallest rate of growth to largest:

Answers	Selected Answer
$3^n + n^2 \log n$	1. $1000000\, n$
$\left(\frac{5}{2}\right)^n + \left(\frac{7}{3}\right) n^2$	2. $n^3 + n^2 \log n$
$1000000\, n$	3. $n^2 + n^3 \log n$

$(3n-1)!$

4. $\left(\frac{7}{3}\right)^n + \left(\frac{5}{2}\right)n^2$

$n^2 + n^3 \log n$

5. $\left(\frac{5}{2}\right)^n + \left(\frac{7}{3}\right)n^2$

$n^3 + n^2 \log n$

6. $3^n + n^2 \log n$

$\left(\frac{7}{3}\right)^n + \left(\frac{5}{2}\right)n^2$

7. $(3n-1)!$

Response Feedback: Perfect! Well done.
