Review Test Submission: Week 11 Quiz

User	Dong Gao
Subject	Algorithms and Complexity
Test	Week 11 Quiz
Started	21/05/16 11:17 PM
Submitted	21/05/16 11:18 PM
Due Date	27/05/16 11:59 PM
Status	Completed
Attempt Score	4 out of 4 points
Time Elapsed	0 minute
Instructions	You should attempt the quiz after the lecture and your tutorial. • The quiz is available for a period of 10 days. • You may attempt the quiz multiple times (if you happen to get a question wrong, you can do it again) • Your score on the quiz will be recorded in the grade book. The score is not used when determining your final mark in this subject • The quiz might not display equations correctly in some browsers. If you experience problems, we recommend that you use Firefox. **Note:** you must complete at least eight of the weekly quizzes to meet one of the hurdle requirements in this subject.

Question 1

1 out of 1 points

Consider this instance of the knapsack problem. We have a total capacity W = 12 and six items, with weights and values as follows:

item	weight	value
1	3	20
2	2	15
3	3	25
4	4	30

5	5	30
6	6	50

The dynamic programming algorithm will establish that the optimal value that can be achieved for this instance is:

Selected Answer: 95

Response Feedback: Yes, that's right. Items 2, 4 and 6 will be selected.

Question 2

1 out of 1 points

A connected weighted undirected graph G has 57 nodes and 194 edges. How many edges does a minimum spanning tree for G have?

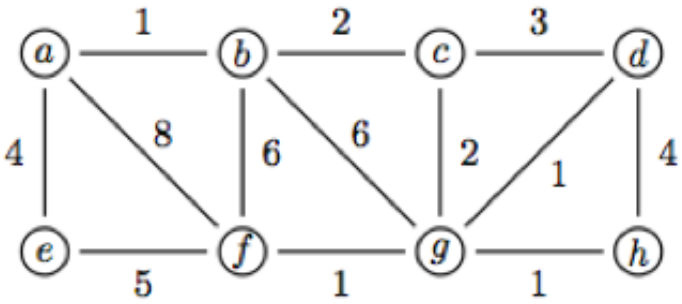
Selected Answer: 56

Response Feedback: Yes, too easy. For a connected undirected graph <V,E>, any spanning tree has |V|-1 edges.

Question 3

1 out of 1 points

Consider the graph below. What is the cost of its minimum spanning tree, that is, the sum of its edges' weights?



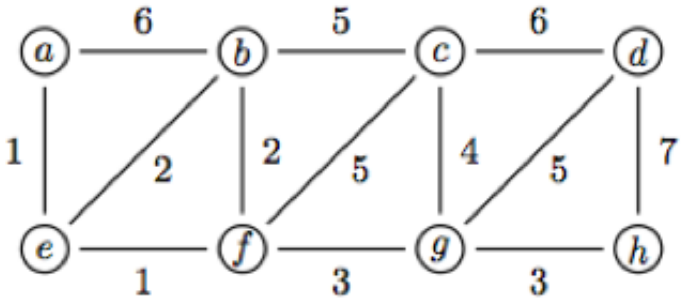
Selected Answer: 12

Response Feedback: You got that right!

Question 4

1 out of 1 points

Consider the graph below. How many different minimum spanning trees does it have?



Selected Answer: 2

Response Feedback: Yes, correct.
